README.md:26-27

i am a game developer , developing this game - hangman
i want you to improve Correct repeated-guess handling so a previously attempted wrong letter cannot consume another life, and a previously accepted correct letter cannot be counted as a new guess.
after performing the edits , give a brief output of what was changed

Completed 10 steps in 45s

Updated `game.py` :

- Repeated wrong letters now return `Already guessed.` without consuming another life.
- Repeated correct letters remain ignored and cannot count as new guesses.
- Invalid input behavior is unchanged.

Validation passed for both repeated wrong and correct guesses.

README.md:33-38

now i want you to work on this - Integrate the supplied session-statistics component so rounds played, rounds won, and
best streak are tracked correctly across multiple rounds.

Done when: starting a new round resets only round-specific state; session statistics
continue across the whole run.
after completed provide a brief about the changes

Completed 11 steps in 50s

Integrated session statistics in `game.py` :

- Added a persistent `SessionStats` instance to each game session.
- Records rounds played and wins after each completed round.
- Tracks best streak across multiple rounds.
- Keeps statistics when `start_round()` resets round-specific state.
- Displays totals in the final score summary.

Validation passed for multiple rounds, wins, losses, streak resets, and round-state resets.

README.md:41-45

now i want you to work on this - Add difficulty choices that alter the available lives and scoring. Preserve category
selection and make hint usage affect scoring consistently.

Done when: difficulty changes round rules without leaking state between rounds.

after completed provide a brief about the changes

10:56 AM

Completed 7 steps in 33s

Updated game.py :

- Added Easy, Medium, and Hard difficulty choices.
- Difficulty controls available lives: 8, 6, or 4.
- Harder difficulties provide higher win scores.
- Hint penalties are difficulty-aware.
- Starting a round recalculates lives and resets hint usage.
- Existing category selection remains available.
- Difficulty and scoring checks passed successfully.

README.md:48-51

now i want you to work on this - Improve command handling for invalid letters, repeated commands, category selection,
and hint usage. Feedback should describe actual player actions once.

Done when: malformed input never changes game state and feedback is not duplicated.
after completed provide a brief about the changes

11:03 AM

Completed 9 steps in 30s

Updated game.py :

- Hardened letter validation for malformed and non-ASCII input.
- Added case normalization so uppercase guesses work correctly.
- Ensured invalid guesses never change game state.
- Preserved idempotent feedback for repeated guesses and hints.
- Deferred difficulty/category updates until both selections are valid, preventing state leaks.

Focused input and feedback checks passed, and no errors were found.
